

See, Protect, and Resolve It All.

Prevent threats at faster speed,
greater scale, and higher accuracy
than humanly possible.

The Future of Cybersecurity is Autonomous.

Cyber attackers move fast. Fast enough that 1-10-60 has become an obsolete model for effective detection, investigation, and response. SentinelOne Singularity XDR is the only cybersecurity platform empowering modern enterprises to take action in real time against the world's most sophisticated, machine-speed threats.

Together, we can defeat the cyber attacks of today and tomorrow.

Cheers,

Evan Davidson

Vice-President for Asia Pacific & Japan,
SentinelOne

SentinelOne Is Pushing the Boundaries of Autonomous Security.

This Is How. 

ACTIONABLE XDR

Block and remediate advanced attacks at machine speed using cross-platform, enterprise-scale data analytics.

DISTRIBUTED AI

Equip every endpoint and workload—no matter where they are—to respond intelligently with powerful static & behavioral AI.

PATENTED STORYLINE

Empower analysts with the context they need, faster, by automatically connecting and correlating events in one illustrative view.

Smarter, Stronger, Faster... Superhuman.

The Next Revolution in Endpoint Security

Legacy Antivirus

Signature-based endpoint tools fail to detect today's advanced cyber threats, such as ransomware, and lack the scalability and sustainability needed by modern enterprises.

"Next-Gen" Endpoint Security

Despite superior detection coverage than signature-based solutions, most endpoint tools today require significant manual intervention by analysts, slowing their time-to-detect and respond.

SentinelOne[®]

SentinelOne leverages static & behavioral AI models to autonomously detect malicious behavior, build context, and remediate attacks faster—all without analyst intervention.

The Return on Revolutionary Tech

Customers See 353% ROI When Switching From Legacy AV

The Singularity XDR Platform is designed to maximize customer value and help you realize a return on your investment faster than the competition. Between longer standard data retention periods, autonomous attack reconstruction & contextualization with Storyline™, and patented 1-click remediation and rollback, SentinelOne customers see an average of 353% ROI over 3 years according to the Forrester Total Economic Impact™ (TEI) Study.

353% ROI

THE TEST

Two days of emulated APT testing in 109 phased steps

THE RESULTS

SentinelOne automatically correlated the entire test into 9 campaign-level alerts.

SentinelOne Excels Across Major Customer KPIs & Delivers Business Value:

Unparalleled Visibility

SentinelOne leads the pack, delivering 100% detection for all 19 attack steps.

Most Analytics Detections 3 Years Running

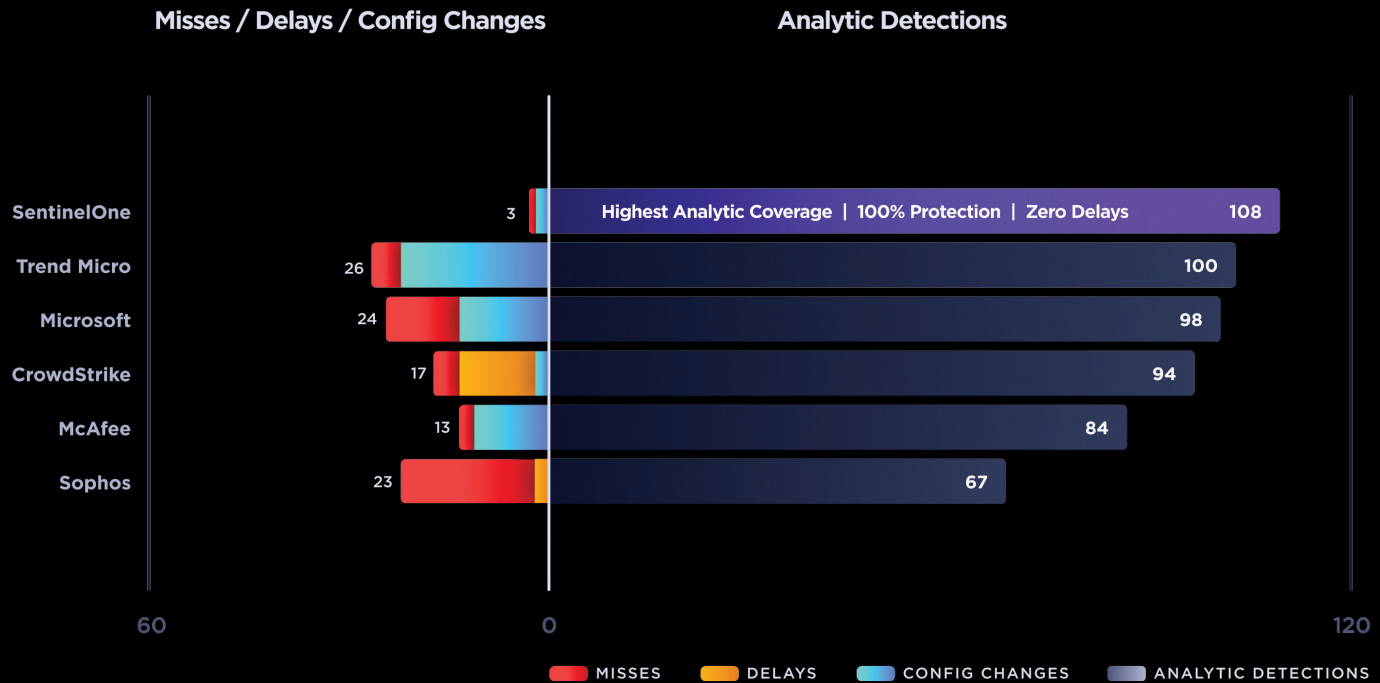

SentinelOne offers the highest analytic coverage, delivering 108 of 109 detections.

Real-Time Detection, Zero Delays

SentinelOne detections deliver on their promise out of the box, in real time, without delay.

MITRE ATT&CK Evaluation Results

SentinelOne vs. CrowdStrike

3 Reasons Why Enterprises Choose Us

Detection Without Dependencies

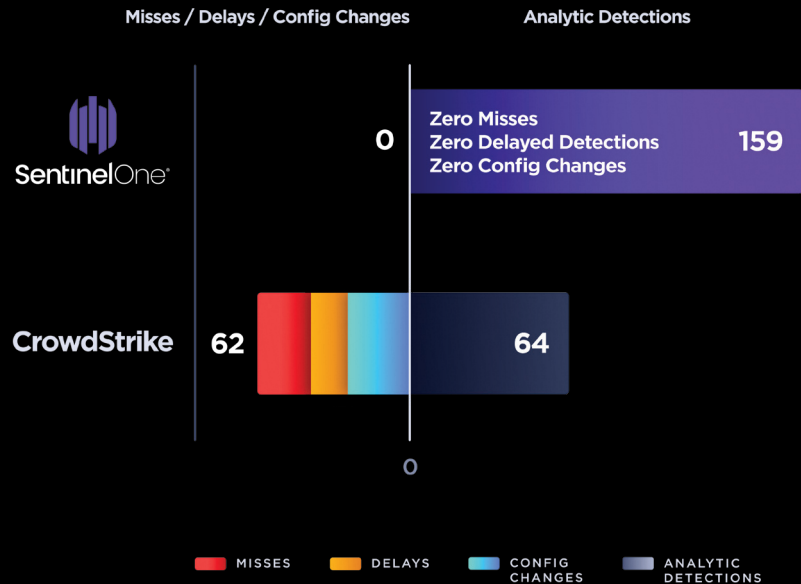

CrowdStrike's 1-10-60 model is slow to detect, slow to investigate, even slower to recover. SentinelOne leverages AI—not analyst intervention—to act on malicious activity in real time with the fastest recovery on the planet.

Proven Performance Advantage

SentinelOne consistently outperforms CrowdStrike in the MITRE Engenuity ATT&CK Evaluation—the industry's most trusted 3rd party test. Every year, the results demonstrate how we make analysts more efficient and effective without misses, delays, or configuration changes.

No Nickel-and-Diming for Data You Need

SentinelOne offers longer EDR data retention than CrowdStrike by default, and our patented Storyline™ technology automatically correlates and contextualizes your alerts without requiring costly professional or managed services.

SentinelOne vs. Trend Micro

3 Reasons Why Enterprises Choose Us

Single-Pane Visibility & Control

Today's SOC analyst doesn't have the time to manage a new console for every added functionality with Trend Micro. SentinelOne brings together native endpoint protection, detection & response, cloud workload security, and network security into one console and lightweight agent.

Putting the "R" in XDR

Don't stop at just the detection of threats. While Trend Micro is limited to rudimentary remediation capabilities that don't take the full kill chain into context, SentinelOne leads the market with 1-click and automatic remediation and rollback that cleans up every step of an attack.

Security That Doesn't Cost Stability

Trend Micro's approach to securing Linux introduces new risk by running its agent in kernel space, requiring due diligence to prevent panics. The Sentinel Agent bypasses these pitfalls with a DevOps-friendly approach that operates entirely in user space.

SentinelOne vs. Symantec

3 Reasons Why Enterprises Choose Us

Legacy vs. The Long Run

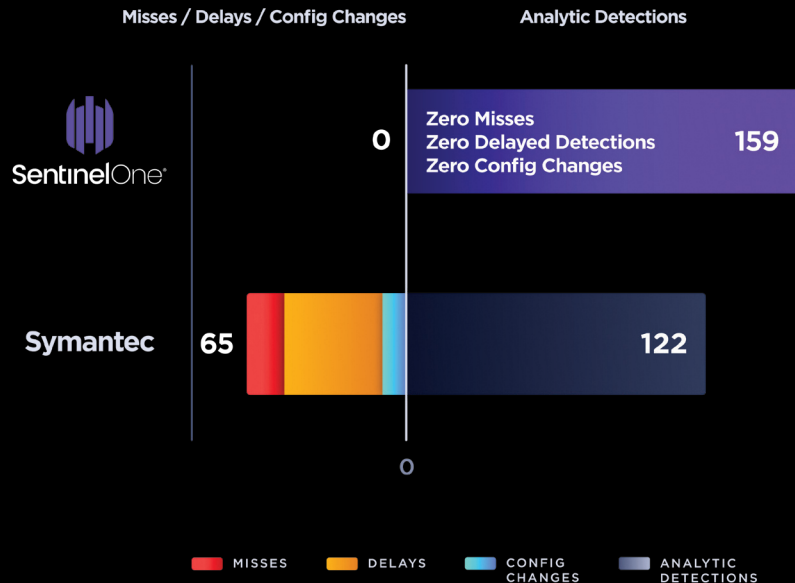

Since Symantec's acquisition in 2019, its customers report ongoing challenges with coverage of modern threats, maintenance of a console not built to scale, and waning support. At SentinelOne, our future-thinking platform is designed to handle threats as they emerge and is backed by a rapidly-growing global support & services team.

Proven Protection Against the Unknown

Like many legacy antivirus vendors, Symantec relies heavily on known signatures and cloud lookups, missing advanced threats such as fileless and ransomware attacks. SentinelOne's AI-driven approach detects and mitigates even previously-unknown malicious activity.

One Console, One Agent

While Symantec requires you to spend valuable time switching between consoles and manually correlating data and remediating endpoints, SentinelOne offloads these tasks with Storyline™ technology and patented 1-click remediation—all from one easy-to-use console.

THIS IS SENTINELONE

Securing the Best of the Best.

4,000+ Customers and Counting, Including 4 of the Fortune 10 and Hundreds of the Global 2000.
